Make the Most of Your Horse's Supplements

By Jennifer Roberts

Are you looking to get the most out of your pricey supplements and expensive grain? With the rising prices of grain, hay, and supplements, it makes sense to do all you can do to get the most for your hard-earned money. However, don't think that cutting corners and looking for discount products is the way to stretch your budget.

Consider adding one of Lucerne Farms' forage products to your horse's feeding routine. Mixing chopped hay with your grain and supplements encourages your horse to chew more naturally when eating these nutrient-filled meals. The benefit of slower, more deliberate chewing is that more saliva is generated—therefore, more nutrients can be absorbed as the feed passes through your horse's system. This means that your horse is getting the most out of each mouthful of grain, supplements, and chopped forage.

When using Lucerne Farms Forage Products as part of your horse's diet, you can be assured that each bag has identical nutritional properties. This consistent feeding program helps your horse to flourish with the guaranteed nutritional values. Ideally, with your horse eating several small meals a day, you will be able to cut back on your horse's grain consumption, and maybe even diminish the amount of the supplements that your horse needs.

Are you worried that we are presenting you with a "one-size-fits-all" approach? Lucerne understands that horses are individuals, and they have created custom formulations to help your horse thrive. With products for each of life's stages, as well as specific compounds for insulin-resistant (IR) horses, horses with laminitis, and horses with equine polysaccharide storage myopathy (EPSM), they truly have products for every horse.

This innovative new feeding approach may require a bit more work on your part, but you'll be amazed by the results that your horse will show you. According to Lisa-Marie Beckwith, who has been using this forage for over two years, "I have found it to be just the best forage available; all of my horses are thriving, from picky Thoroughbred mares to ponies with Cushing's disease; it has been a lifesaver."

Consider this approach: letting your horse go back to how nature intended. With the addition of this forage, your horse is allowed to eat more naturally, simulating the act of grazing as they ingest their grain and supplements.

Producers of
Quality Forage Feeds

Lucerne Farms

"Hi FIBER"

Ingredients:

Dehydrated chopped timothy hay, oat hay, Alfalfa hay, Cane molasses, Propionic Acid (preservative).

GUARANTEED ANALYSIS:

Protein...9.0%
Fat...1.5%
Fiber...30.0%
